

NY Housing Market Analysis Dashboard

by Rozhnov Egor

Goal

The goal of this project is to analyze how different factors influence housing prices in New York City.

The dashboard helps users explore the relationship between:

- Location
- Property size
- Bedrooms
- Bathrooms
- Property type

Dataset

The project uses the NY House Dataset that was found on Kaggle and contains:

- Property prices
- Property size (square footage)
- Number of bedrooms
- Number of bathrooms
- Property type
- Address information
- Geographic coordinates
- Neighborhood information

Data cleaning was applied to remove invalid records and extreme outliers*

Features

Interactive Filters:

- Budget range
- Neighborhood
- Property type
- Bedrooms
- Bathrooms

Main Visualizations:

- Interactive property map
- Price vs size correlation analysis
- Neighborhood comparison
- Property type comparison

What I Learned

During this project I learned:

- Streamlit dashboard development
- Interactive data visualization
- Working with real-world datasets
- Data cleaning techniques
- GitHub project management
- Deploying applications with Streamlit Cloud

THANK YOU
